1 Introduction

To me, Economics represented a useful and interesting major when I took my course with Dr. Holmes years ago. It utilized math, logic, and was very relevant to public life. As for data science, I know very little about it, however, I believe it is important to know at least some about.

I took this class becuase I enjoyed your teaching style in Econometrics and it sounded both useful and interesting.

No idea for what I want to do for my project yet

My goals are to become knowledgeable about and able to utilize data science tools.

Plan for after graduation is to work for either a major oil and gas firm or for a consulting firm.

2 Equation

$a^2 + b^2 = c^2$
